Walmart Sales Analysis & Prediction

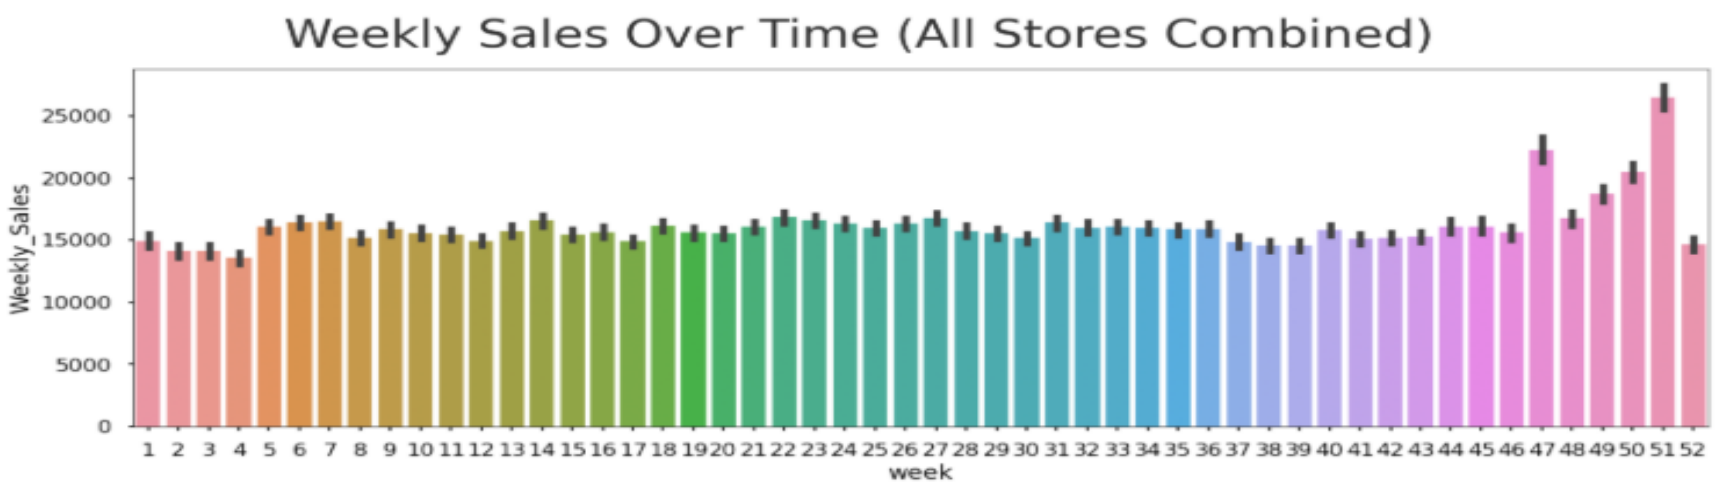
Yogita Dahiya
Hindu Girls College, Sonipat

Project Objective

* Analyze Walmart sales data and predict future sales using machine learning.

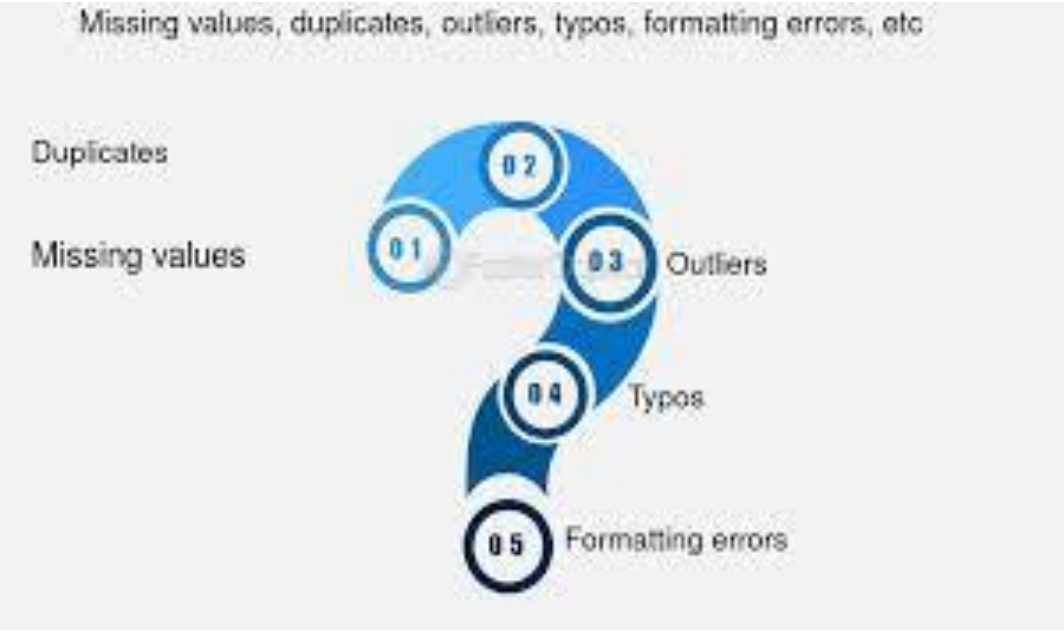
Dataset Overview

* Dataset includes weekly sales of 45 stores with features like fuel price, CPI, unemployment, and holidays.



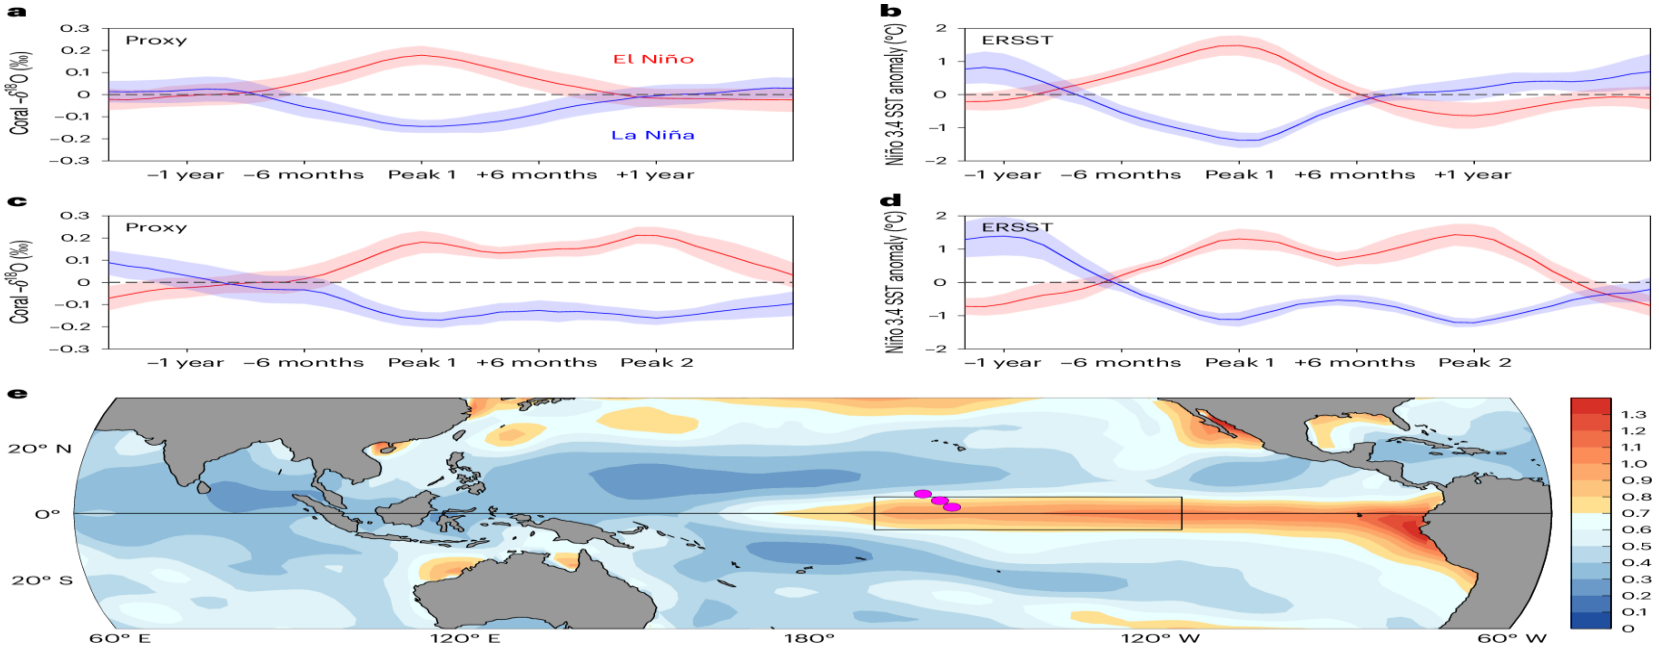
Data Cleaning

* Handled missing values, removed duplicates, corrected date format, and ensured data consistency.



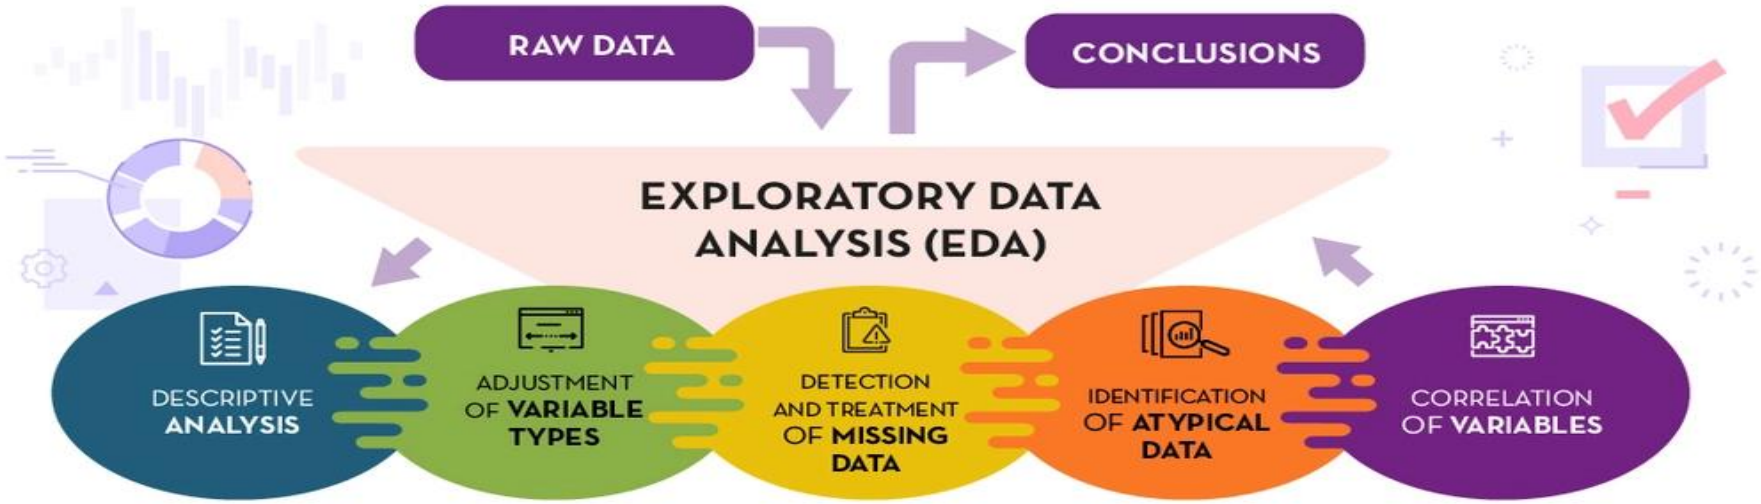
Feature Engineering

* Extracted Month and Year from Date and created meaningful features for analysis.

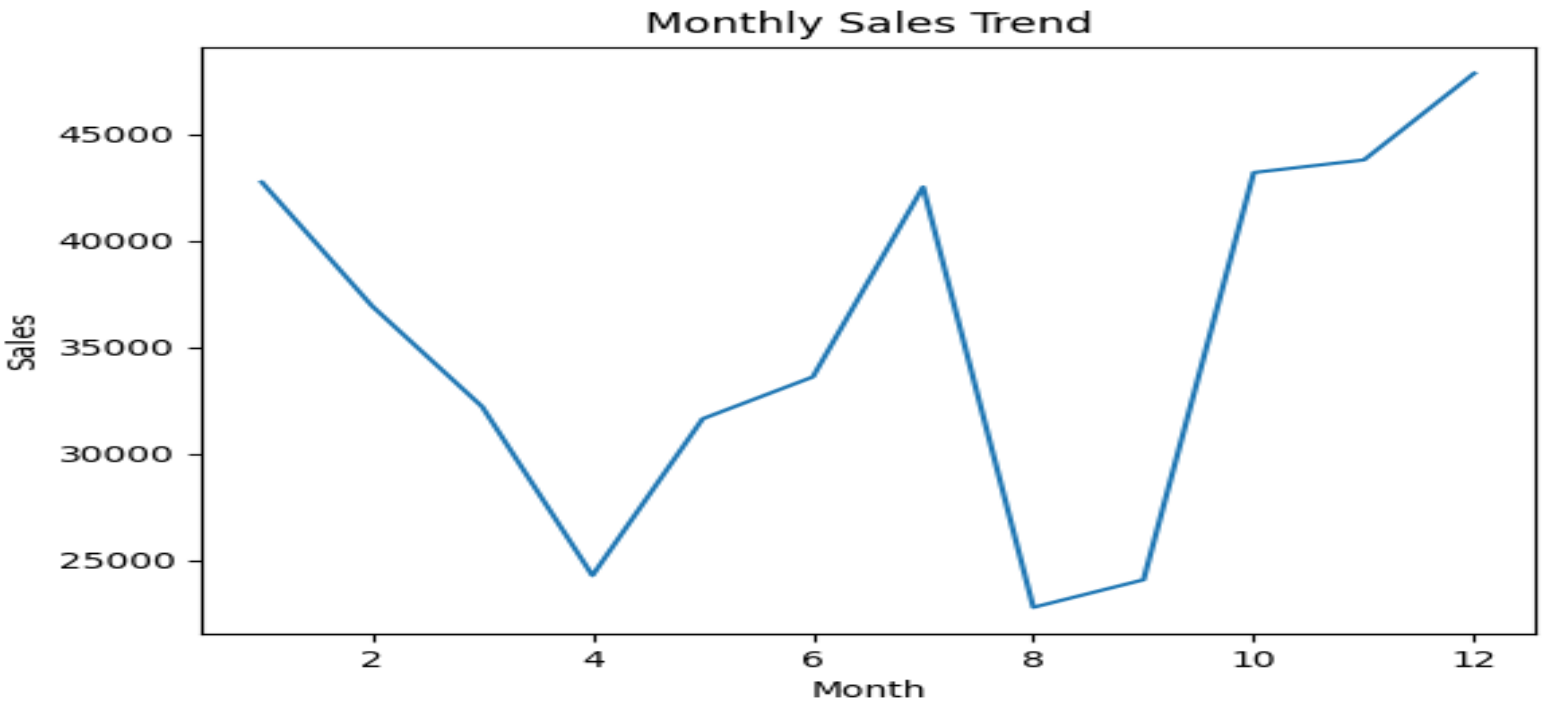


EDA (Exploratory Data Analysis)

* Analyzed trends by store, month, and holidays to understand sales behavior.

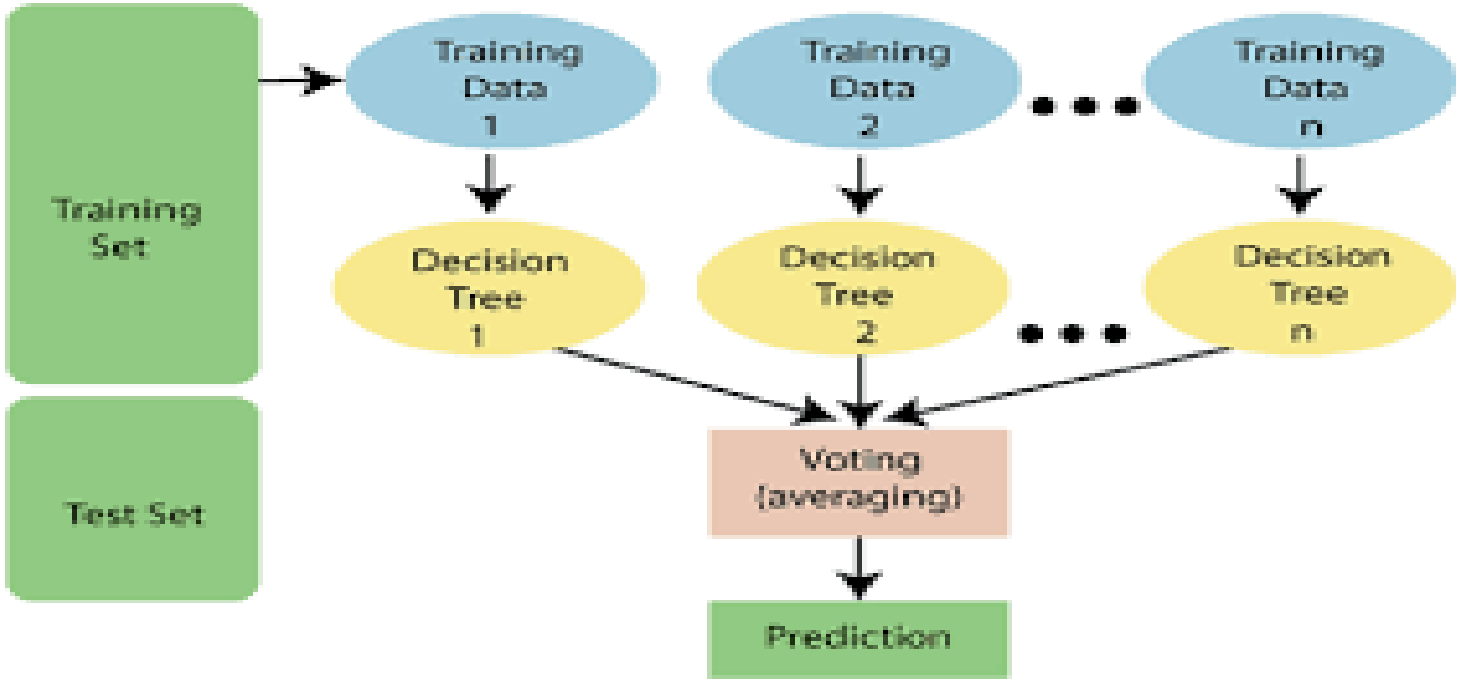


Sales Trend Analysis



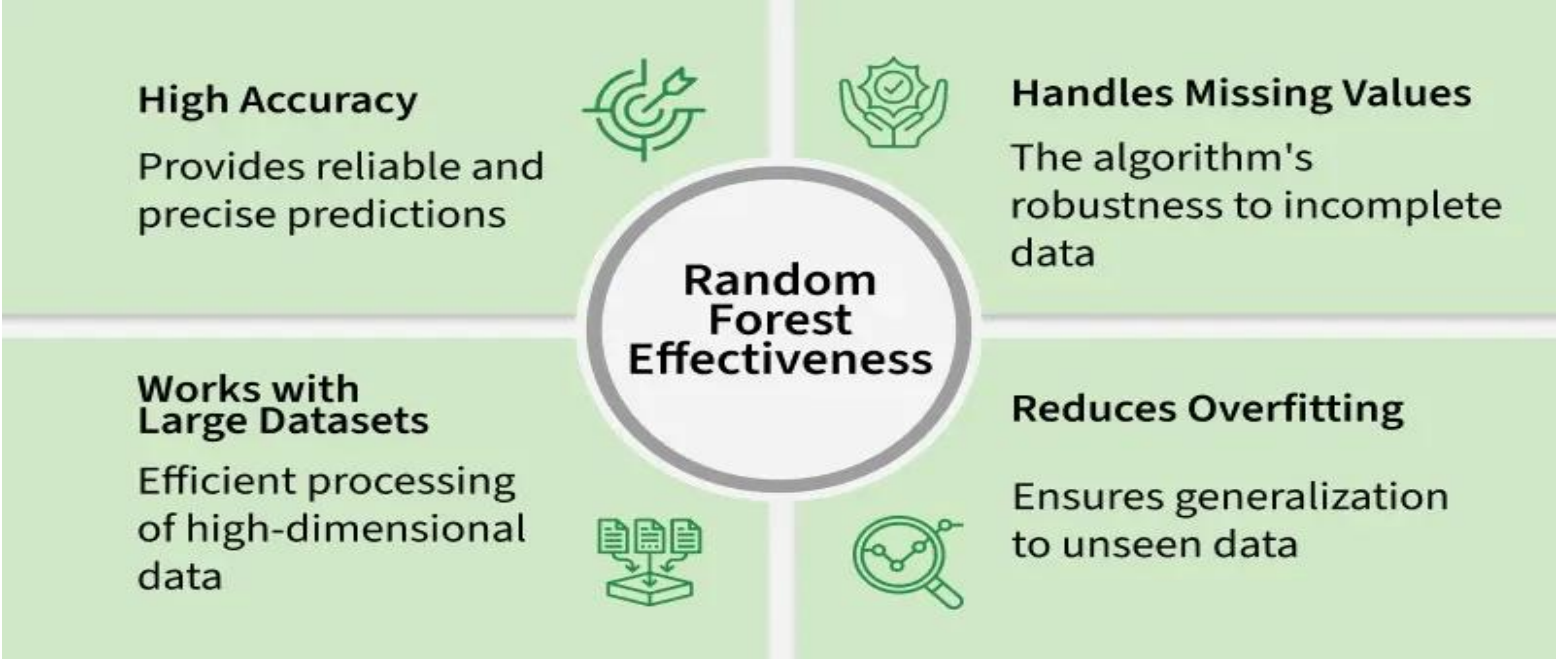
Machine Learning Models

* Applied Linear Regression and Random Forest for sales prediction.



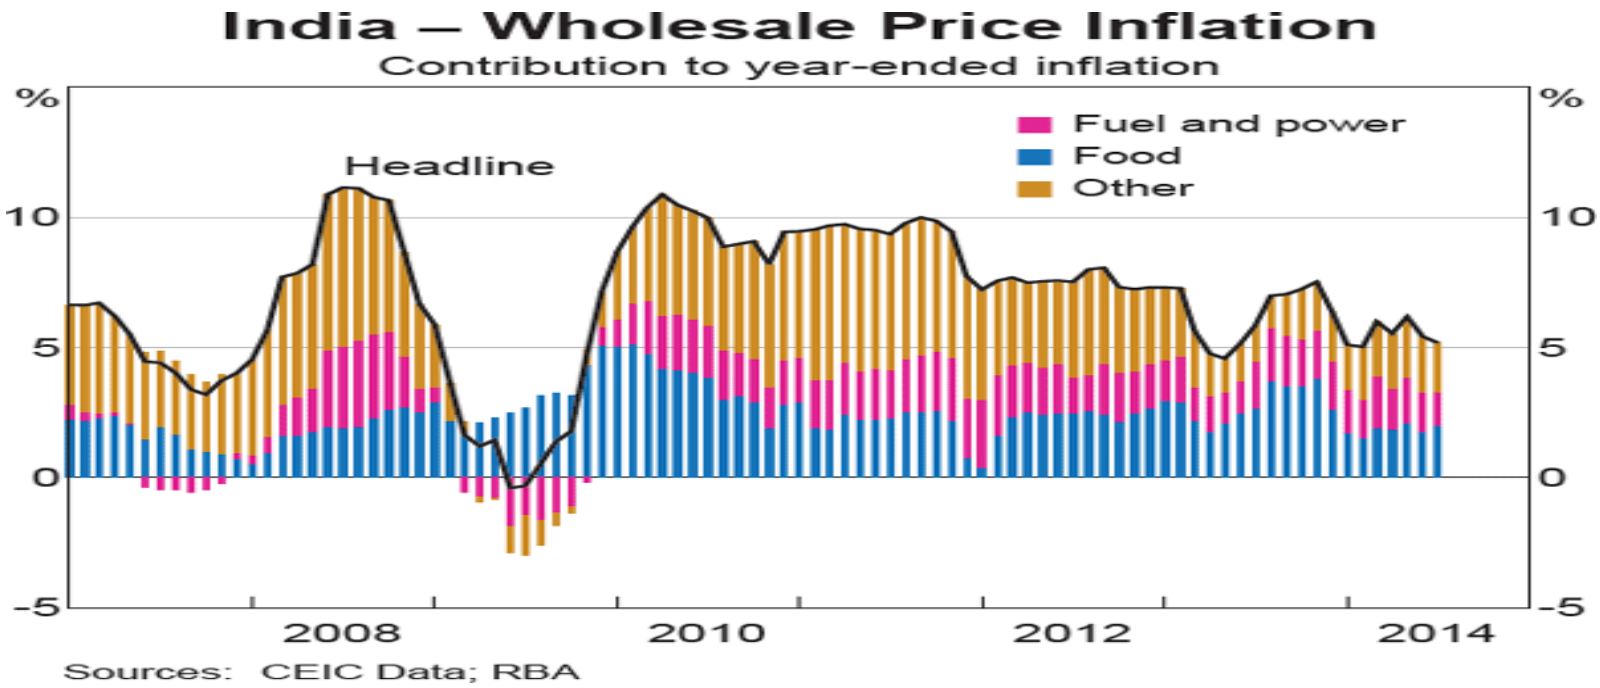
Model Performance

* Random Forest provided better accuracy compared to Linear Regression.



Key Insights

* Sales vary by season and store. Economic factors like CPI and unemployment influence sales.



Conclusion

* Data analysis and ML help businesses make better decisions and predict future sales.
